

WOBATECH 

FROM COMPLEXITY TO SIMPLICITY!

FROM COMPLEXITY TO SIMPLICITY!

You are dreaming of a bespoke infrastructural solution for functional and flexible rooms? One that accompanies you right into the future? One that adapts and changes whenever you are? Once this was our vision, too – now we build it.

The WOBATECH infrastructure carrier unit forms the very basis of our creative work. We have been contributing 25 years of experience into this design and are continuously developing the system. A maximum of safety, proper function and longevity are our utmost priorities. Once installed, the WOBATECH infrastructure carrier system provides you with the freedom to always adapt your rooms and buildings to your individual needs – easily, quickly, and flexibly.

Our approach shows our roots in engineering: It is analytical, structural, visionary, and influenced by creative vision. We think in processes and lapses of time. We also bundle worksteps and systematically review our results.

Whether for functional interior rooms or buildings in the laboratory construction field, for medical engineering or the industry: We develop and produce a solution perfectly adapted to your needs, your rooms, and your future.

From Complexity to Simplicity!

WE THINK FROM ABOVE

The basic structure of the WOBATECH system is based on the idea of a platform. The central infrastructure carrier unit facilitates all installations from above: Whether supply or extract air, media pipes for water and gases, lighting for rooms and workplaces, as well as the complete electrical installations. However, it also holds the complete supply of media, shelving systems, dimming and laser protection curtains as well as partitioning elements in a modular and flexible way. This provides you with the necessary freedom to redesign your rooms and infrastructure at any time.

Our favoured material is aluminium which is not only pleasing by its functionality but also by its aesthetics. And the modular WOBATECH system makes use of these unique features: High-precision processing, high stability, low weight, and utmost modularity. With this system we are able to create functional workspaces that will provide you with individuality and adaptability, not only now but also in future.

The triad of timeless design, utmost functionality and ground-breaking technology has always been the very basis of the WOBATECH products. Its load-bearing grid is the core of our modular WOBATECH system. It is expandable, flexible, and modular, and serves as a carrier for any kind of media and further equipment.

Room solutions

Our room solutions provide protection for workplaces or devices. Partitions, cubicles, enclosures with vertical or horizontal sashes and curtain systems may be adapted to any requirements and can be removed, converted or subsequently installed at any time. Our system also allows for straightforward room-in-room solutions by means of our cubicles.

We produce carrier units, special and lifting tables, rolling stands and customized designs in many different executions and shapes. And we take care of ergonomics, individual dimensions, material requirements and loads. Our mobile supply units provide you with the flexibility needed in everyday use.

ALWAYS THE RIGHT DECISION

CONCEPTUAL DESIGN + ENGINEERING

Finding the ideal solution for your requirements starts by analysing present and future requirements. You will benefit from our long-term experience in the field of conceptual designs regarding customized solutions. Just explain your applications to us and we will go to develop the most efficient solution for you, for your today's as well as for your needs of tomorrow.

PLANNING + PROJECT ENGINEERING

An interdisciplinary planning and project engineering concept is our key to sustainable success. Our software support for 3-D design and BIM ensures the perfect coordination of all trades, resulting in very short installation times and a transparent cost overview at any time.

PRODUCTION + PREFABRICATION

To ensure high quality standards we produce our systems at our production facilities in Germany and in Switzerland. The consistent modular construction allows for a high level of prefabrication, scalability and adaptability. Fast installation times on site and a beneficial price-performance ratio are thus guaranteed.

INSTALLATION + SERVICE

Our professionally equipped installation teams will install your WOBATECH solutions on the spot, globally. In case of upgrades and subsequent installations we will support you with extensive services. Thanks to our modular system costs can be reduced to a minimum, which allows you to benefit from long-term investment protection.
